

## REFRESH PEEL<sup>2</sup> 30 ml

REFRESH PEEL<sup>2</sup> (with improved formula) is used to remove the upper layers of the epidermis. This action has a strong anti-aging effect on the skin. It renews and stimulates collagen synthesis and strengthens the skin.

### Mechanism of Action:

REFRESH PEEL<sup>2</sup> contains Glycolic acid and Kojic acid. Glycolic acid has the smallest molecular structure of all AHA acids. Because of its small molecular structure, glycolic acid easily penetrates the epidermis and reaches the depth of the dermis, where it activates a double action peeling due to its two active ingredients:

### Active ingredients:

- Glycolic acid (50%) – anti-aging effect, exfoliates the epidermis, promotes epidermolysis, disperses basal layer melanin and stimulates the growth of new skin.
- Kojic acid (5%) – acts by delaying hyperpigmentation and gives a slight bleaching effect on existing pigmented spots.

### Suitable for:

- Signs of skin aging
- Prematurely aged skin due to excessive sun exposure
- Rough texture, fine lines and wrinkles
- Enlarged pores, dull, sallow skin color
- Hyper-pigmentation
- Melasma (darkening of the skin)

Must be mixed with the CLINICCARE Peel Blender to perfectly tailor the peel strength and acid pH.

### Producer:

CLINICCARE of Sweden Ltd
